

## Mobile Management- Items Movement Process

### About the company

With 220 retail stores in India, the client is a major retailer in India. The client required an In-Store inventory management solution on Hand Held Terminals (HHT) thus benefitting from the speed, accuracy, productivity, reduced cost of an automated process.

### Business objectives

To develop an online RF based SAP solution for Item Movement Process.

### Business complexities

- STO creation using HHT required..
- Goods Issue to store and DC using HHT required.
- Scrapping of scanned articles to be done using HHT.

### Project highlights

- RF based solution for Hand held terminal MC9090 integrated with SAP system.
- Formal S&OP Process was defined to address goods movement in store.
- Integrated solution to the user to create STO, carry out goods movement and scrapping of scanned articles.

### Value delivered to the client

- Formal S&OP Process was designed leading to digitization of goods movement process.
- Complete automation of STO creation, goods movement to store and DC and scrapping processes.
- Faster and more efficient use of HHTs .
- Effective SAP integration with RF solution hence reducing lag in store processes
